

Product manager and builder with a strong analytical foundation and experience translating customer feedback into shipped, intuitive products while catching operational gaps before they reach users.

EDUCATION

University of Southern California

Los Angeles, CA

Master of Science: Cyber Security Engineering, GPA: 3.83.

May 2026

Bachelor of Arts: Economics and Data Science, Minor in Business Law.

May 2025

PROFESSIONAL EXPERIENCE

Ren

Product Manager (tryren.com)

Jul 2026-Present

AI startup helping managers handle hard conversations, built on a method used by 100k+ leaders: the Accountability Dial.

- Sole PM across the whole product: customer discovery, design, launch, and go-to-market.
- Redesigned the desktop and mobile app in 4 weeks, handing engineering 50+ build-ready screens.
- Rebuilt the core feature as a five-stage board where the AI flags what needs attention and managers decide what moves; proposed the opt-in rollout that reduced launch risk for existing users.
- Rebuilt the marketing site end to end, repositioned the messaging around growth, and added enterprise pages, personally shipping 46 changes to production; free-trial signups grew by 60%.
- Led product for the largest enterprise account, a Fortune 500 manufacturer: tailoring a private version.
- Co-ran the newsletter with 3,000+ subscribers and produced the product walkthrough videos for PLG.

Spin.AI

Product Management Intern

Sept 2025-Jun 2026

SaaS security startup protecting cloud apps (Google Workspace, Microsoft 365) from data loss and ransomware.

- Defined requirements for a Value-Added Partner controls feature: assessed how partner configs would interact with platform settings, mapped edge cases, and wrote the BRD engineering built from.
- Found that solutions engineers had to log out and back in to switch client accounts, validated the friction with customer success, and designed the in-app account-switching flow that became the fix.
- Analyzed 20+ SaaS products to surface feature gaps and built 100+ security control mappings that fed the roadmap and the controls library partners use to configure protection per client environment.

Local - AI Food Recommendation App

Solo-Builder (eatwithlocal.com)

Mar 2026-Present

- Building an end-to-end iOS app that creates hyper-local restaurant recommendations from unstructured reviews, ratings, and creator content, using a RAG pipeline on pgvector with a React Native frontend.
- Owning every product decision: scoped the feature set deliberately to ship, designed the intent-classification and conversation layer on the Claude API, and built the live waitlist/landing page.

Quantech Datascience

Product Operations Intern

Jun 2025-Aug 2025

A tax compliance startup in India building software for chartered accountant firms handling sensitive client financial data.

- Caught that client data separation was enforced only at the UI layer, confirmed unauthorized access was possible through the API, and documented it so engineering shipped the fix before launch.
- Traced through logs the OCR pipeline silently returned incomplete data, then specified a post-extraction completeness check that flags bad scans to users instead of passing bad data downstream.

PROJECTS

[LUCERNA - Hacking for Defense](#)

- Led problem definition for an Air Force contracting visibility system: synthesized insights across stakeholder interviews, and defined the system architecture for an LLM-powered Text2SQL pipeline.

SKILLS

- **Technical:** Python, SQL, JavaScript, React, React Native, Next.js, Postgres, pgvector, Supabase.
- **AI/ML:** Claude API, RAG pipelines, vector search, embeddings, prompt design, Claude Code, Cursor.
- **Design & Tools:** Pencil, prototyping, design systems, Pendo, HubSpot, Linear, Clay, GitHub.
- **Product & GTM:** User research, BRDs, roadmaps, launches, positioning, competitive analysis, SEO.
